

# BigToys® *quickFacts*: Summit Series

The Summit Series offers a twist on BigToys' long standing approach to creating balanced playground designs that provide both social and physical play. The open architecture encourages exploration of the entire structure, where even structural elements have become a part of the play experience.

Activities on the Summit Series are arranged so they are all accessible from the ground up, giving children of all abilities a chance to play together in the same place. Adding BigToys' freestanding activities can enhance this ground level accessibility giving you a wide range of combinations for your playground project.

- **Balanced Play**  
Like all BigToys play equipment, the Summit Series was developed to provide a balance of both social and physical play. This unique integration of activities creates spaces where children can safely stop and socialize without leaving the play equipment.
- **Open Architecture**  
The open architecture encourages exploration of the entire structure, where even structural elements become a part of the play experience. Children inherently want to gather in areas that offer a wide vantage point from which to watch their peers playing. Summit Series "transparent" designs allow children to view the entire play structure from anywhere within the equipment. Ease of supervision is enhanced as a result of these open site lines too.
- **Ground Level Accessibility**  
Activities on the Summit Series are arranged so they are all accessible from the ground up, giving children of all abilities a chance to play together in the same place. This makes Summit Series designs a great addition to existing, non-ADA compliant play areas where accessibility is lacking.
- **Limited Space Requirements**  
The efficient Summit Series designs are able to be placed in areas where reduced space is a concern. The densely packed activities and lack of platforms, roofs and enclosures allow for a smaller footprint than other traditional playground designs.
- **Great Play Value**  
Unlike many competing products, Summit Series designs don't include expensive, arbitrary components that are added purely for aesthetic appeal. To provide our customers with the best possible value, all components found on Summit Series structures serve a function that contributes directly to play value.
- **Complying With, Not Avoiding Safety Standards**  
BigToys Summit Series features recognizable play events that are designed to comply with industry safety standards. We view decisions by other manufacturers to rename activities to avoid meeting safety standards as irresponsible and a disservice to customers and children.
- **Color Choices**  
Summit Series structures are available in all BigToys standard color schemes including Coastal, Meadow, Baja and Woodland. These color "environments" are designed to provide a range of pleasing color combinations that are also interesting to kids.
- **Alternate Upright Colors**  
All Summit Series designs made from recycled metal uprights include at least one alternate colored post as a means for adding variety and visual appeal.
- **BigToys Materials Choices**  
Like all BigToys play structures, Summit Series designs are available with a choice of recycled metal or conditioned wood uprights.
